Preface	<i>xv</i>
Notation and Definitions	<i>xix</i>
1 Response Envelopes	1
1.1 The Multivariate Linear Model	2
1.1.1 Partitioned Models and Added Variable Plots	5
1.1.2 Alternative Model Forms	6
1.2 Envelope Model for Response Reduction	6
1.3 Illustrations	10
1.3.1 A Schematic Example	10
1.3.2 Compound Symmetry	13
1.3.3 Wheat Protein: Introductory Illustration	13
1.3.4 Cattle Weights: Initial Fit	14
1.4 More on the Envelope Model	19
1.4.1 Relationship with Sufficiency	19
1.4.2 Parameter Count	19
1.4.3 Potential Gains	20
1.5 Maximum Likelihood Estimation	21
1.5.1 Derivation	21
1.5.2 Cattle Weights: Variation of the X -Variant Parts of Y	23
1.5.3 Insights into $\hat{\mathcal{E}}_{\Sigma}(\beta)$	24
1.5.4 Scaling the Responses	25
1.6 Asymptotic Distributions	25
1.7 Fitted Values and Predictions	28
1.8 Testing the Responses	29
1.8.1 Test Development	29
1.8.2 Testing Individual Responses	32
1.8.3 Testing Containment Only	34
1.9 Nonnormal Errors	34
1.10 Selecting the Envelope Dimension, u	36
1.10.1 Selection Methods	36

- 1.10.1.1 Likelihood Ratio Testing 36
 - 1.10.1.2 Information Criteria 37
 - 1.10.1.3 Cross-validation 37
 - 1.10.2 Inferring About $\text{rank}(\beta)$ 38
 - 1.10.3 Asymptotic Considerations 38
 - 1.10.4 Overestimation Versus Underestimation of u 41
 - 1.10.5 Cattle Weights: Influence of u 43
 - 1.11 Bootstrap and Uncertainty in the Envelope Dimension 45
 - 1.11.1 Bootstrap for Envelope Models 45
 - 1.11.2 Wheat Protein: Bootstrap and Asymptotic Standard Errors, u Fixed 46
 - 1.11.3 Cattle Weights: Bootstrapping u 47
 - 1.11.4 Bootstrap Smoothing 48
 - 1.11.5 Cattle Data: Bootstrap Smoothing 49
- 2 Illustrative Analyses Using Response Envelopes 51**
- 2.1 Wheat Protein: Full Data 51
 - 2.2 Berkeley Guidance Study 51
 - 2.3 Banknotes 54
 - 2.4 Egyptian Skulls 55
 - 2.5 Australian Institute of Sport: Response Envelopes 58
 - 2.6 Air Pollution 59
 - 2.7 Multivariate Bioassay 63
 - 2.8 Brain Volumes 65
 - 2.9 Reducing Lead Levels in Children 67
- 3 Partial Response Envelopes 69**
- 3.1 Partial Envelope Model 69
 - 3.2 Estimation 71
 - 3.2.1 Asymptotic Distribution of $\hat{\beta}_1$ 72
 - 3.2.2 Selecting u_1 73
 - 3.3 Illustrations 74
 - 3.3.1 Cattle Weight: Incorporating Basal Weight 74
 - 3.3.2 Mens' Urine 74
 - 3.4 Partial Envelopes for Prediction 77
 - 3.4.1 Rationale 77
 - 3.4.2 Pulp Fibers: Partial Envelopes and Prediction 78
 - 3.5 Reducing Part of the Response 79
- 4 Predictor Envelopes 81**
- 4.1 Model Formulations 81
 - 4.1.1 Linear Predictor Reduction 81
 - 4.1.1.1 Predictor Envelope Model 83

	4.1.1.2	Expository Example	83
	4.1.2	Latent Variable Formulation of Partial Least Squares Regression	84
	4.1.3	Potential Advantages	86
4.2		SIMPLS	88
	4.2.1	SIMPLS Algorithm	88
	4.2.2	SIMPLS When $n < p$	90
	4.2.2.1	Behavior of the SIMPLS Algorithm	90
	4.2.2.2	Asymptotic Properties of SIMPLS	91
4.3		Likelihood-Based Predictor Envelopes	94
	4.3.1	Estimation	95
	4.3.2	Comparisons with SIMPLS and Principal Component Regression	97
	4.3.2.1	Principal Component Regression	98
	4.3.2.2	SIMPLS	98
	4.3.3	Asymptotic Properties	98
	4.3.4	Fitted Values and Prediction	100
	4.3.5	Choice of Dimension	101
	4.3.6	Relevant Components	101
4.4		Illustrations	102
	4.4.1	Expository Example, Continued	102
	4.4.2	Australian Institute of Sport: Predictor Envelopes	103
	4.4.3	Wheat Protein: Predicting Protein Content	105
	4.4.4	Mussels' Muscles: Predictor Envelopes	106
	4.4.5	Meat Properties	109
4.5		Simultaneous Predictor–Response Envelopes	109
	4.5.1	Model Formulation	109
	4.5.2	Potential Gain	110
	4.5.3	Estimation	113
5		Enveloping Multivariate Means	117
5.1		Enveloping a Single Mean	117
	5.1.1	Envelope Structure	117
	5.1.2	Envelope Model	119
	5.1.3	Estimation	120
	5.1.3.1	Maximum Likelihood Estimation	120
	5.1.3.2	Asymptotic Variance of $\hat{\mu}$	121
	5.1.3.3	Selecting $u = \dim(\mathcal{E}_{\Sigma}(\mathcal{M}))$	122
	5.1.4	Minneapolis Schools	122
	5.1.4.1	Two Transformed Responses	123
	5.1.4.2	Four Untransformed Responses	124
	5.1.5	Functional Data	126
5.2		Enveloping Multiple Means with Heteroscedastic Errors	126

5.2.1	Heteroscedastic Envelopes	126
5.2.2	Estimation	128
5.2.3	Cattle Weights: Heteroscedastic Envelope Fit	129
5.3	Extension to Heteroscedastic Regressions	130
6	Envelope Algorithms	133
6.1	Likelihood-Based Envelope Estimation	133
6.2	Starting Values	135
6.2.1	Choosing the Starting Value from the Eigenvectors of \hat{M}	135
6.2.2	Choosing the Starting Value from the Eigenvectors of $\hat{M} + \hat{U}$	137
6.2.3	Summary	138
6.3	A Non-Grassmann Algorithm for Estimating $\mathcal{E}_M(\mathcal{U})$	139
6.4	Sequential Likelihood-Based Envelope Estimation	141
6.4.1	The 1D Algorithm	141
6.4.2	Envelope Component Screening	142
6.4.2.1	ECS Algorithm	143
6.4.2.2	Alternative ECS Algorithm	144
6.5	Sequential Moment-Based Envelope Estimation	145
6.5.1	Basic Algorithm	145
6.5.2	Krylov Matrices and $\dim(\mathcal{U}) = 1$	147
6.5.3	Variations on the Basic Algorithm	147
7	Envelope Extensions	149
7.1	Envelopes for Vector-Valued Parameters	149
7.1.1	Illustrations	151
7.1.2	Estimation Based on a Complete Likelihood	154
7.1.2.1	Likelihood Construction	154
7.1.2.2	Aster Models	156
7.2	Envelopes for Matrix-Valued Parameters	157
7.3	Envelopes for Matrix-Valued Responses	160
7.3.1	Initial Modeling	161
7.3.2	Models with Kronecker Structure	163
7.3.3	Envelope Models with Kronecker Structure	164
7.4	Spatial Envelopes	166
7.5	Sparse Response Envelopes	168
7.5.1	Sparse Response Envelopes when $r \ll n$	168
7.5.2	Cattle Weights and Brain Volumes: Sparse Fits	169
7.5.3	Sparse Envelopes when $r > n$	170
7.6	Bayesian Response Envelopes	171

- 8 Inner and Scaled Envelopes 173**
 - 8.1 Inner Envelopes 173
 - 8.1.1 Definition and Properties of Inner Envelopes 174
 - 8.1.2 Inner Response Envelopes 175
 - 8.1.3 Maximum Likelihood Estimators 176
 - 8.1.4 Race Times: Inner Envelopes 179
 - 8.2 Scaled Response Envelopes 182
 - 8.2.1 Scaled Response Model 183
 - 8.2.2 Estimation 184
 - 8.2.3 Race Times: Scaled Response Envelopes 185
 - 8.3 Scaled Predictor Envelopes 186
 - 8.3.1 Scaled Predictor Model 187
 - 8.3.2 Estimation 188
 - 8.3.3 Scaled SIMPLS Algorithm 189

- 9 Connections and Adaptations 191**
 - 9.1 Canonical Correlations 191
 - 9.1.1 Construction of Canonical Variates and Correlations 191
 - 9.1.2 Derivation of Canonical Variates 193
 - 9.1.3 Connection to Envelopes 194
 - 9.2 Reduced-Rank Regression 195
 - 9.2.1 Reduced-Rank Model and Estimation 195
 - 9.2.2 Contrasts with Envelopes 196
 - 9.2.3 Reduced-Rank Response Envelopes 197
 - 9.2.4 Reduced-Rank Predictor Envelopes 199
 - 9.3 Supervised Singular Value Decomposition 199
 - 9.4 Sufficient Dimension Reduction 202
 - 9.5 Sliced Inverse Regression 204
 - 9.5.1 SIR Methodology 204
 - 9.5.2 Mussels' Muscles: Sliced Inverse Regression 205
 - 9.5.3 The "Envelope Method" 206
 - 9.5.4 Envelopes and SIR 207
 - 9.6 Dimension Reduction for the Conditional Mean 207
 - 9.6.1 Estimating One Vector in $S_{E(Y|X)}$ 208
 - 9.6.2 Estimating $S_{E(Y|X)}$ 209
 - 9.7 Functional Envelopes for SDR 211
 - 9.7.1 Functional SDR 211
 - 9.7.2 Functional Predictor Envelopes 211
 - 9.8 Comparing Covariance Matrices 212
 - 9.8.1 SDR for Covariance Matrices 213
 - 9.8.2 Connections with Envelopes 215

- 9.8.3 Illustrations 216
- 9.8.4 SDR for Means and Covariance Matrices 217
- 9.9 Principal Components 217
 - 9.9.1 Introduction 217
 - 9.9.2 Random Latent Variables 219
 - 9.9.2.1 Envelopes 220
 - 9.9.2.2 Envelopes with Isotropic Intrinsic and Extrinsic Variation 222
 - 9.9.2.3 Envelopes with Isotropic Intrinsic Variation 223
 - 9.9.2.4 Selection of the Dimension μ 225
 - 9.9.3 Fixed Latent Variables and Isotropic Errors 225
 - 9.9.4 Numerical Illustrations 226
- 9.10 Principal Fitted Components 229
 - 9.10.1 Isotropic Errors, $\Sigma_{X|Y} = \sigma^2 I_p$ 230
 - 9.10.2 Anisotropic Errors, $\Sigma_{X|Y} > 0$ 231
 - 9.10.3 Nonnormal Errors and the Choice of f 232
 - 9.10.3.1 Graphical Choices 232
 - 9.10.3.2 Basis Functions 232
 - 9.10.3.3 Categorical Response 232
 - 9.10.3.4 Sliced Inverse Regression 233
 - 9.10.4 High-Dimensional PFC 233

Appendix A Envelope Algebra 235

- A.1 Invariant and Reducing Subspaces 235
- A.2 M-Envelopes 240
- A.3 Relationships Between Envelopes 241
 - A.3.1 Invariance and Equivariance 241
 - A.3.2 Direct Sums of Envelopes 244
 - A.3.3 Coordinate Reduction 244
- A.4 Kronecker Products, vec and vech 246
- A.5 Commutation, Expansion, and Contraction Matrices 248
- A.6 Derivatives 249
 - A.6.1 Derivatives for η , Ω , and Ω_0 249
 - A.6.2 Derivatives with Respect to Γ 250
 - A.6.3 Derivatives of Grassmann Objective Functions 251
- A.7 Miscellaneous Results 252
- A.8 Matrix Normal Distribution 255
- A.9 Literature Notes 256

Appendix B Proofs for Envelope Algorithms 257

- B.1 The 1D Algorithm 257
- B.2 Sequential Moment-Based Algorithm 262
 - B.2.1 First Direction Vector w_1 263
 - B.2.2 Second Direction Vector w_2 263

- B.2.3 $(q + 1)$ st Direction Vector w_{q+1} , $q < u$ 264
- B.2.4 Termination 265

Appendix C Grassmann Manifold Optimization 267

- C.1 Gradient Algorithm 268
- C.2 Construction of B 269
- C.3 Construction of $\exp\{\delta A(B)\}$ 271
- C.4 Starting and Stopping 272
